

NodeMatcher: Synthesis of XPath Program for Web Data Extraction

Paul Luh
University of Wisconsin-Madison
luh@cs.wisc.edu

Abstract

Keywords data management, web data extraction, program synthesis, machine learning

1 Introduction

What is the problem?
Why is it interesting and important?
Why is it hard? (E.g., why do naive approaches fail?)
Why hasn't it been solved before? (Or, what's wrong with previous proposed solutions? How does mine differ?)
What are the key components of my approach and results?
Also include any specific limitations.
